Storage

FREE USE LIMIT

FREE USE LIMIT

- The Free Use Limit is a parameter of Storage Contracts, which specifies the maximum Injectability and Deliverability provided free of charge within the agreed storage capacity.
- The Free Use Limit equals the booked storage capacity (100% WGV) and is applied separately for Injectability and Deliverability.
- If within a specified period of time the set Free Use Limit is exceeded, all injection/withdrawal above this level is subject to a charge for **the 'Additional Injectability' or 'Additional Deliverability' Additional Service.**
- This mechanism ensures that the necessary costs related to larger injected or withdrawn volumes are paid only by the customers who actually use Injectability and Deliverability in excess of the agreed Free Use Limit.
